#### Abstract

The private housing developers who are now the main producer of housing in the country, has been able to influence and shaped the urban housing. This has been made possible through the strategies adopted in overcoming the problems and constraints imposed on them, particularly in dealing with the application of planning permission. The imposition of planning controls towards housing developers in Malaysia has its implication not only in creating a good urban living environment, but at the same it has some other drawbacks. Thus, it is the concern of this paper to look into the impacts of the developers' strategies on housing development as it may have some implication towards the formulation of housing policy for the nation.
