

What is Journal Citation Reports?

Journal Citation Reports (JCR) is a comprehensive and unique resource for evaluating and comparing journals, using citation data drawn from over 7,500 scholarly and technical journals from more than 3,300 publishers in over 60 countries. It offers a systematic way to determine the relative importance of journals within their subject fields or to see how frequently articles are cited

Using online databases: Journal Citation Reports (InCites)

The screenshot shows the 'Journals By Rank' section of the InCites database. On the left, there are various filters: 'Go to Journal Profile' with a search box containing 'journal', 'Compare Journals', 'View Title Changes', 'Select Journals', 'Select Categories', 'Select JCR Year' (set to 2015), 'Select Edition' (with checkboxes for SCIE and SSCI), 'Open Access' (with an 'Open Access' checkbox), 'Category Schema' (set to 'Web of Science'), 'JIF Quartile', 'Select Publisher', 'Select Country/Territory', 'Impact Factor Range' (with dropdowns for minimum and maximum), and 'Average JIF Percentile Range' (with dropdowns for minimum and maximum). At the bottom left are 'Clear' and 'Submit' buttons. The main area displays a table of journals ranked by impact factor. Three blue callout boxes provide instructions:

- Top callout: "Select a subject Category and click Submit at the bottom of the column to see the relative impact factors for all the journals in that Category"
- Middle callout: "The year offered is always the most recent data available, but you can choose to focus on a previous year's data if you want"
- Bottom callout: "You can select the edition – SCIE for Science Edition or SSCI for Social Sciences Edition. The default is for both to appear, which will greatly increase the number of possible journal categories and journals."
